Defendant.)	
_____)	

DEFENDANT’S MOTION FOR JUDICIAL NOTICE OF CENSUS DATA

Pursuant to Rule 201(b)(2) of the Federal Rules of Evidence, Defendant respectfully asks the Court to take judicial notice of the following facts based on data produced by the Census Bureau. The facts below reflect data from the December 2017 release of the 2012-2016 five-year American Community Survey (“ACS”). Data supporting these facts are publicly available on the Census Bureau’s website through the American Factfinder application and are identified in tables attached as Exhibit 1. The Court previously took judicial notice of data from the 2011-2015 ACS (ECF 125 at 2-3). As of the date of this filing, the 2012-2016 ACS is the most recent set of five-year ACS data available.

At trial, the Court asked for the most recent Census data from the ACS for Sumter County, and accepted a stipulation to supplement the record with regard to ACS data. The Parties agreed to work together and file with the Court a Joint Motion for Judicial Notice by this Friday, January 12, 2018.

By agreement, Plaintiff prepared a proposed joint motion for Defendant’s review. Defendant agreed to all of the substance of Plaintiff’s proposed facts for judicial notice, with

minor edits to the wording of the motion for accuracy, and asked to add one additional ACS table and one additional fact. Plaintiff refused. Specifically, Plaintiff is unwilling to agree to the joint submission of Table B03002, (Exhibit 1 at 3), and related fact number 2, because the Table was not included in *Plaintiff's* motion for judicial notice filed, and granted, in the Fall (“Plaintiff’s Fall Motion”). (See Dkt. 110 and Dkt. 125) We understand that Plaintiff may be willing to agree to the remainder of the facts to be noticed and tables in Exhibit 1 because those facts and tables were proposed by Plaintiff.

The Court’s request for the most current Census data was never limited to the data selected by *Plaintiff* and included in his Fall Motion.¹ In discussions about the ACS data at trial, the Court noted that it did not want stale information, like data from the 2010 Census, for topics relevant to its decision. (Trial Tr., Dec. 13, 2017, 203:14-16). The data in Table B03002, detailing the population of Sumter County by Hispanic or Latino origin by race, was a topic of examination throughout the trial and is relevant to this Court’s determinations about Sumter County’s demographics. Fed. R. Evid. 401 (“Evidence is relevant if (a) it has any tendency to make a fact more or less probable than it would be without the evidence, and (b) the fact is of consequence in determining the action.”).

For the same reasons Plaintiff moved this Court to take judicial notice of census data in the Fall, Table B03002 is suitable for judicial notice. See *Hollinger v. Home State Mut. Ins. Co.*, 654 F.3d 564, 572-73 (5th Cir. 2011) (“United States census data is an appropriate and frequent subject of judicial notice.”); *Benavidez v. City of Irving*, 638 F. Supp. 2d 709, 721 (N.D. Tex. 2009) (taking judicial notice of an American Community Survey publication and observing

¹ Similarly, the Parties never agreed or even discussed that the Census data for judicial notice would be limited by *Plaintiff's* selection of data for its Fall Motion.

“that the Census Bureau considers ACS data reliable and intends for it to be relied upon in decisions such as Voting Rights Act compliance”), *see also United States v. Phillips*, 287 F.3d 1053, 1055 n.1 (11th Cir. 2002) (taking judicial notice of census data); *Hollis v. Davis*, 941 F.2d 1471, 1474 (11th Cir. 1991) (same); *Moore v. Comfed Sav. Bank*, 908 F.2d 834, 841 n.4 (11th Cir. 1990) (same); *Wilson v. Ill. Cent. R.R. Co.*, No. 09-cv-7392, 20120 WL 135446, at *3 (N.D. Ill. Jan 12, 2012) (taking judicial notice of ACS data and collecting cases).

For these reasons, Defendant respectfully requests that this Court take judicial notice of the following facts. A proposed order is attached.

Defendant asks the Court to take judicial notice of the following:

1. According to the 2012-2016 ACS, Sumter County has a total population of 31,070 persons, of whom 13,095 (42.1%) are white and 16,159 (52.0%) are black. Ex. 1 at 1 (Table B02001).
2. According to the 2012-2016 ACS, Sumter County has a total population of 31,070 persons, of whom 12,399 (39.9%) are non-Hispanic white and 16,122 (51.9%) are non-Hispanic black. Ex. 1 at 3 (Table B03002).
3. According to the 2012-2016 ACS, Sumter County has a voting-age population of 23,541 persons, of whom 10,991 (46.7%) are white and 11,652 (49.5%) are black. Ex. 1 at 5-10 (Tables B01001, B1001A, and B1001B).
4. According to the 2012-2016 ACS, 22.2% of Sumter County's population aged 25 years and over lacks a high-school diploma or its equivalent. Among white persons, 13.6% lack a high-school diploma, whereas 29.9% of black persons lack a high-school diploma. Ex. 1 at 11-17 (Table S1501).
5. According to the 2012-2016 ACS, 19.9% of Sumter County's population aged 25 years and over has a bachelor's degree or higher. Among white persons, 30.9% have a bachelor's degree or higher, whereas 8.8% of black persons have a bachelor's degree or higher. Ex. 1 at 11-17 (Table S1501).
6. According to the 2012-2016 ACS, Sumter County has an unemployment rate of 12.7% among people in the labor force aged 16 years and over. The unemployment rate is 7.1% for white persons and 18.2% for black persons. Ex. 1 at 18-21 (Table S2301.)

7. According to the 2012-2016 ACS, Sumter County has a poverty rate of 33.6%. The poverty rate is 15.3% for white persons and 46.2% for black persons. Ex. 1 at 22-25 (Table S1701).
8. According to the 2012-2016 ACS, the median household income in Sumter County is \$33,534. The median income is \$48,672 for households headed by white persons and \$22,736 for households headed by black persons. Ex. 1 at 26-27 (Table S1903).
9. According to the 2012-2016 ACS, the per capita income in Sumter County is \$18,487. The per capita income is \$27,675 for white persons and \$11,891 for black persons. Ex. 1 at 28-30 (Tables B19301, B19301A, and B19301B).
10. According to the 2012-2016 ACS, 27.7% of all households in Sumter County receive Supplemental Nutrition Assistance Program (“SNAP”) benefits (also known as food stamps). Among households headed by a white person, 19.1% receive SNAP benefits, while 76.8% of households headed by a black person do. Ex. 1 at 31-35 (Table S2201).

Date: January 10, 2018

2012-2016 American Community Survey 5-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Tell us what you think. Provide feedback to help make American Community Survey data more useful for you.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

	Sumter County, Georgia	
	Estimate	Margin of Error
Total:	31,070	*****
White alone	13,095	+/-168
Black or African American alone	16,159	+/-201
American Indian and Alaska Native alone	70	+/-51
Asian alone	388	+/-53
Native Hawaiian and Other Pacific Islander alone	0	+/-27
Some other race alone	775	+/-214
Two or more races:	583	+/-223
Two races including Some other race	145	+/-104
Two races excluding Some other race, and three or more races	438	+/-206

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2012-2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to

compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.

3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

85 years and over	105	+/-65

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2012-2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2012-2016 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Questions for "wage and salary" and "tips, bonuses and commissions" were asked separately for the first time during non-response follow-up via Computer Assisted Telephone Interview (CATI) and Computer Assisted Personal Interview (CAPI). Prior to 2013 these questions were asked in combination, "wages, salary, tips, bonuses and commissions."

While the 2012-2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An 'l' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An 'l' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is

not appropriate.

7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Employment and unemployment estimates may vary from the official labor force data released by the Bureau of Labor Statistics because of differences in survey design and data collection. For guidance on differences in employment and unemployment estimates from different sources go to Labor Force Guidance.

While the 2012-2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2012-2016 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Nonfamily income in the past 12 months	36.7%	(X)	(X)	(X)

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

When information is missing or inconsistent, the Census Bureau logically assigns an acceptable value using the response to a related question or questions. If a logical assignment is not possible, data are filled using a statistical process called allocation, which uses a similar individual or household to provide a donor value. The "Allocated" section is the number of respondents who received an allocated value for a particular subject.

While the 2012-2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data).

While the 2012-2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2012-2016 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

[PROPOSED] ORDER

Upon consideration of Defendant’s Motion for Judicial Notice of Census Data, and for good cause shown, it is hereby ordered that the motion is **GRANTED**. The Court takes notice of the following facts:

1. According to the 2012-2016 ACS, Sumter County has a total population of 31,070 persons, of whom 13,095 (42.1%) are white and 16,159 (52.0%) are black.
2. According to the 2012-2016 ACS, Sumter County has a total population of 31,070 persons, of whom 12,399 (39.9%) are non-Hispanic white and 16,122 (51.9%) are non-Hispanic black.
